About

Passionate about innovation and technology. I love to learn new things, enhance my knowledge, and to contribute in tech field. I enjoy building projects, exploring AI/automation, and improving my skills in system design and algorithms through hands-on experience from personal projects and internships.

EXPERIENCE

AI-Shala Technologies Pvt. Ltd.

Jan. 2026 – Present

Intern

New Delhi (On-Site)

- Collaborated in developing an AI-powered grading platform to automate evaluation of handwritten subjective answer sheets using Vision-Language Models (VLMs) and Large Language Models (LLMs).
- Developed resume-capable processing logic to identify and process only pending answer sheets, reducing redundant computation and improving pipeline reliability.
- Worked with multiple LLMs and AI services for grading, evaluation, and feedback generation, enabling scalable assessment across large batches of answer scripts.
- Optimized data processing workflows, file management, and error-handling mechanisms to improve robustness in large-scale processing.
- Collaborated on building a scalable architecture capable of supporting educational institutions in automated grading, feedback generation, and assessment analytics.

SKILLS

Programming Languages : Python, C++, Java, C, C#

Web Dev. : HTML, CSS, JavaScript, Flask, Python, MySQL, Bootstrap

Backend : ASP.NET Core, .NET, Entity Framework Core, SQL Server, SignalR, REST APIs

AI/ML : LLMs, VLMs, LangChain, RAG, Prompt Engineering

Tools : Git, Github, VS Code, Postman, Linux, Selenium, TMUX, Ollama, GitHub Actions

APIs and Services : OpenRouter API, Gemini API, Hyperbolic API, Serper API, Serp API, Spotify API, YouTube Music API, Twilio API, Google Meet API

Soft Skills : Communication, Teamwork, Problem-solving

PROJECTS

SnippetsAI (AI News Automation System)

End-to-end automation that discovers trending AI news, generates AI-written summaries, and auto-publishes them across social platforms on a schedule.

- **Tech Stack:** Python, Selenium, Google Gemini API, Serper API, SerpAPI
- **Key Highlights:**
 - * **Automated news discovery:** searches the web with Serper API and SerpAPI to collect trending, high-quality AI article links from predefined keywords.

- * **AI-written summaries:** condenses long articles into concise, engaging, social-ready posts using the Google Gemini API.
- * **Multi-platform publishing:** posts to Twitter (X), LinkedIn, and WhatsApp groups from a single unified workflow.
- * **Unattended automation:** drives Selenium with pre-authenticated Chrome profiles to post directly, with no logins or repeated authentication.
- * **Activity logging:** records every generated summary and published post to CSV, Markdown, and text files for tracking and auditing.

TeamPulse (Team Operations Platform)

A role-aware internal web platform unifying meetings, standups and tasks, attendance and leave, KPIs, a collaborative wiki, and real-time notifications into a single application.

- **Tech Stack:** C#, ASP.NET Core 9 (MVC), EF Core 9, SQL Server, SignalR, SMTP
- **Key Highlights:**
 - * **Role-based access:** separate, authorization-enforced experiences for Admins, Team Leads, and Members across every module.
 - * **Meetings suite:** scheduling with approvals, live rooms with real-time chat, Google Meet integration, and auto-summarized minutes emailed to attendees.
 - * **Standups & task board:** full task lifecycle with assignment, comments, issue threads, reassignment, and evidence-based finalization.
 - * **Attendance & leave engine:** per-designation policies with automatic monthly accrual, caps, and year-end lapse; approvals auto-adjust balances.
 - * **Real-time collaborative wiki:** concurrent multi-user editing over SignalR/WebSockets with rich and Markdown modes and safe HTML sanitization.
 - * **Automation & notifications:** .NET Hosted Services run leave accrual and attendance/task close-outs on schedule, with email, WhatsApp, and in-app alerts plus CSV-export dashboards.

FeelTheBeat (Personalised Music Playlist Builder)

A serverless music assistant that auto-saves repeat tracks, rebuilds a weekly recommendation playlist, and delivers an AI-written weekly music summary over WhatsApp – running entirely on a schedule.

- **Tech Stack:** Python, Spotify API (Spotipy), YouTube Music API (ytmusicapi), Google Gemini API, Twilio, GitHub Actions
- **Key Highlights:**
 - * **Platform-agnostic design:** Spotify and YouTube Music are interchangeable backends behind a shared five-function contract, swappable via a single config value.
 - * **Automatic library curation:** detects heavy-rotation tracks over a rolling play-history window and saves them idempotently, skipping duplicates.
 - * **Weekly discovery playlist:** rebuilds a recommendation playlist each week, seeded by current listening rather than all-time taste.
 - * **AI-written recap:** Google Gemini turns raw listening data into a personal weekly summary, with a deterministic fallback so a message always sends.
 - * **WhatsApp delivery:** sends via Twilio using approved Content Templates to bypass WhatsApp's 24-hour window for unattended weekly delivery.
 - * **Zero-cost serverless:** runs on GitHub Actions cron with config-driven scheduling and no server, database, or hosting bill.

Mood2Music (Mood-Based Music Recommendation System)

A personalized music recommendation system that suggests songs based on user mood and language preferences.

- **Tech Stack:** Python, Pandas, Spotify API, Flask
- **Key Highlights:**
 - * **Mood & language matching:** filters and ranks over a 90,000+ song dataset to produce personalized results.
 - * **Spotify playback:** plays recommended tracks directly through the Spotify API.
 - * **Discovery mode:** a random-song option surfaces tracks for effortless exploration.
 - * **Feedback loop:** logs likes and dislikes to improve recommendation quality over time.

SRMS (Student Result Management System)

Developed a database-driven system to manage student records, marks, and result processing with role-based access control.

- **Tech Stack:** Python, MySQL, Flask
- **Key Highlights:**
 - * **Relational schema:** designed a normalized database for students, subjects, and results.
 - * **Role-based auth:** separate Admin and Teacher access controls.
 - * **Core modules:** student management, subject handling, and marks entry.
 - * **Automated results:** computes total, percentage, and grade from entered marks.
 - * **Data integrity:** validations prevent duplicate and inconsistent entries.

EDUCATION

Guru Gobind Singh Indraprastha University

Aug. 2024 – Aug. 2028

BTech. in CSE-AIML – 9.382 CGPA (upto 2nd Year)

New Delhi

- Building strong foundations in programming, software engineering, and modern technologies, with a focus on problem-solving, data structures and algorithms, object-oriented programming, database management, web development, and industry-standard development practices. Continuously exploring emerging technologies and applying theoretical knowledge through hands-on projects and collaborative learning.

RPS Sr. Sec. School

Mar. 2023 – Mar. 2024

Senior Secondary Education – 84.6%

Mahendragarh, Haryana

- Completed Senior Secondary education with a strong foundation in Mathematics, Physics, and Chemistry, developing analytical thinking, problem-solving abilities, and reasoning while preparing for engineering and technology-focused studies.

RP Bohara Public School

Mar. 2021 – Mar. 2022

Secondary Education – 94.8%

Jhunjhunun, Rajasthan

- Completed Secondary School with outstanding academic performance, establishing a solid foundation in mathematics, science, and critical thinking that developed an interest in technology and problem-solving, which led to pursuing higher studies in engineering.
